

Biloxi Public School District Selects HVE for Desktop Virtualization

January 31, 2017

Sphere 3D's virtualization portfolio provides state of the art technology enabling the enhancement of their Virtual Lab, STEM Program, and Virtual Classrooms

SAN JOSE, Calif., Jan. 31, 2017 (GLOBE NEWSWIRE) -- [Sphere 3D Corp.](#) (NASDAQ:ANY), a containerization, virtualization, and data management solutions provider, today announced that Biloxi Public Schools (BPS) has selected HVE ConneXions (HVE) Virtual Desktop Infrastructure (VDI) technology for their classroom VDI environment expansion through authorized reseller, Howard Technologies.

Academic institutions of all sizes are tasked with balancing their budgetary constraints with the need to provide students and faculty the tools they need for success. As such, educational institutions and school districts are taking the lead in accessing the latest technologies to support the digital transformation of their classrooms. Investments in the right virtualization strategy are effectively providing on-demand learning services to students, faculty and staff across infrastructures of all shapes and sizes, culminating in a more efficient school day for teachers and students.

BPS has already embraced the value of the digital classroom and was already well on its way with an existing VDI footprint of three HVE-101-N appliances that supported 300 current users. This latest project expanded their environment from 300 to 900 concurrent users and provided VDI for several general-purpose labs, two advanced STEM Labs, and several classrooms.

Howard Technologies responded to the BPS Desktop Virtualization expansion Request for Proposal (RFP), and the solution was delivered and installed within two weeks of the close of the order to meet the requirements of BPS's 2017 technology initiatives. This expansion helped BPS provide state of the art technology to their educational environment, enhanced their state mandated online testing, and expanded the capabilities of their STEM program.

Quotes

As stated by Alex Mitchell, IT Director of BPS, "The HVE solution was selected for several reasons, but ultimately the HVE next-generation hardware technology, performance, reliability, service, and overall TCO (total cost of ownership) made this decision easy. We really appreciate their turnkey offering that includes the automation of PCoIP zero clients (900), end user policies and controls through active directory, networking configurations, VMware Horizon View automation, and rapid hardware deployment with their integrated VMware appliances. HVE ConneXions provided a complete end-to-end solution that also included a server virtualization environment to support the control servers and high-availability requirements for end user access."

Director of Purchasing for BPS, Kassie Bourque, stated, "The Howard proposal that included the HVE solution was a really easy decision for our school system. Reviewing the requirements and capabilities of vendors is a key aspect for our district to ensure our financial decisions provide the best solutions for our education community and long-term technology roadmap."

Joseph O'Daniel, President of Virtualization and Professional Services for Sphere 3D stated, "We are grateful for the opportunity to work with such a great team at Biloxi Schools on their digital transformation initiatives. Their investment in advanced virtualization technologies frees up valuable time for BPS staff to invest in other aspects of their operations and continue to deliver the best possible learning environment for the students of Biloxi."

About Howard Technologies

Howard Technology Solutions, a value-added reseller, based out of Ellisville, Mississippi, strives to bring to market cutting-edge, reliable, high-quality technology equipment at affordable prices.
