Overland Storage Presents Online iSCSI and IPSAN Building Tutorials

December 15, 2003

What: Overland Storage (Nasdaq: OVRL) hosts a series of Internet- based tutorials that discusses iSCSI benefits and uses, and guides attendees through an actual construction of an IP/iSCSI SAN.

The tutorial will be presented by John Matze, co-architect and co-author of the iSCSI standard and CTO of Overland Storage. In the presentation, he explains iSCSI and describes the applications best served by this exciting new technology. The tutorial is followed by an interactive "how to" session in which an IP/iSCSI SAN is built and configured and includes an opportunity for a Q&A session with an iSCSI pioneer.

The presentation includes actual photos and screen shots of the components needed to build an Ethernet-based SAN, how to connect the components together, how to download and install the necessary software, how to perform SAN configuration and how to integrate IP/iSCSI SAN into business operations. All this in under one hour!

When: December 2003 - January 2004 Wednesday, Dec. 17, 2003 at 8:00 a.m. PST Wednesday, Jan. 14, 2003 at 8:00 a.m. PST Wednesday, Jan. 28, 2003 at 8:00 a.m. PST

Where: To enroll and check seminar dates please visit http://meetingcenter.overlandstorage.com and select "iSCSI Tutorial/How to Build an IP SAN." Attendees must pre- enroll to receive the phone number and access code for the audio portion of the event.
